

## **5 dos and don'ts use in summer**

Summer is the peak time to use electricity, and thunder high-incidence season, so the diesel generator set is highly used in summer. So in daily use, how to notice and maintain?

1. Before start, check the circulating water is enough in water tank. If not enough, please add enough pure water. For the heat is reduced by circulating water.
2. It is hot in summer, users should guarantee the ventilation and cooling of the alternator. Users should clean the dust of the air vent regularly. Diesel generator set mustn't be operated under sun exposure in high temperature to avoid any breakdown.
3. After 5 hours' operation of the set, the equipment should be stopped to have a rest. For the diesel generator set is high-speed compress work, if the equipment is operated for a long time in high temperature, the cylinder block will be damaged.
4. Users should do the lightning protection work in the place where the equipment is placed and the diesel generator set protection connect to neutral.
